In this lab you will learn about homologous, analogous and vestigial structures and their significance in evolution theory. You will also compare amino acids sequencing of humans to other vertebrates. Materials

Evidence of Evolution - Biology

Evidence of Evolution-Answers in gray Background. When Charles Darwin first proposed the idea that all new species descend from an ancestor, he performed an exhaustive amount of research to provide as much evidence as possible. Today, the major pieces of evidence for this theory can be broken down into the fossil record, embryology, comparative anatomy, and molecular biology.

Evidence of Evolution-Answers in gray Background Fossils

1) Identify and describe all three types of structures 2) Elaborate on your description by explaining at least one example not previously described in this lab 3) Explain how observations of these 3 types of structures provide evidence of evolution (a change in the gene frequency of a population over time) through natural selection (survival of the fittest; the theory that organisms that are the best adapted to their environment will have more offspring that will survive to reproduce a ...
